232T—Double black and double polled son of 204D that is larger framed and long-sided. 232T should work well on a set of high percentage Angus cows.

Balancer™

What the Industry Wants... What the Industry Needs!

There are sound reasons that a majority of pork and poultry market animals are already the product of hybrid genetics—Consistency, predictability and economic efficiency.

Balancers offer commercial cattle producers these same advantages today.

Balancer breeders understand that a single breed cannot fit all of the challenges of the beef industry. They understand that the commercial cattle business drives the success of the seedstock industry. That's why they design their breeding programs and align their partnerships with the interest of the commercial industry foremost in their minds. In this case, Balancers are backed up by the same genetic documentation and programs that commercial users enjoy through the American Gelbvieh Association.

✓ The American Gelbvieh Association was the first breed association to offer commercial users a commercial marketing program that includes everything from help in selecting genetics to help in marketing Gelbvieh-sired calves. All at no charge.

✓ The Gelbvieh Alliance—open to all cattle—was the first breed-coordinated grid-based marketing system in the industry. It is still the largest of its kind.

✓ Most recently, the American Gelbvieh Association was the first breed organization to design and promote a crossbreeding system (SmartCross) aimed at helping commercial producers to easily take advantage of heterosis.
